

**Question:**

Why isn't there a traffic cop @ the bridge construction on Friday nite. The traffic between 5:30 and 7:30 is backed up to Charlie Nichols on one side to Clark Hill on the other. Such a pain in the %\$#!@. Plus the fact that there are days when they aren't even there working on the bridge.

**Answer:**

At this point in the North Main Street project, the crews are off site and working on the building of the concrete culvert. Police traffic control is only required on site while the site is an active construction site. Due to the tight nature of the location there is no easy solution to get this project done. It is fully expected that both lanes will be open to traffic by the time snow flies.
